Battery Power Division

Industrial Battery Care Unit

While industrial batteries are less expensive than lift trucks, they can create excessive downtime and expensive truck repairs. Our full range of maintenance programs allows us to customize our offering to your specific application.

Industrial batteries need regular maintenance. If they are not maintained they will develop:

- » Short runtime
- » Low voltage / high amp / heat
- » Dead cells
- » Unbalanced electrolytes
- » Corrosion = shorts. Check electrolyte level and record.
- » Check specific gravity and record

All of these will impact:

- » Truck performance
- » Truck component life
- » Battery life
- » Energy costs

Battery Maintenance ROI

This minimal service investment can often be justified by eliminating just one service call for an electrical truck component failure.

Our Premium Service cleans and neutralizes your batteries within our industrial battery care unit (IBCU), eliminating the possibility of these contaminants reaching your facility.

All water, air, and electricity is provided by the IBCU. The cleaning water is then recycled and disposed in an eco-friendly manner.

Detailed Battery Scheduled Maintenance

- 1) Measure and record all cell voltage and specific gravity levels.
- 2) Wash, neutralize and dry battery. (Premium service washes in the IBCU wash chamber).
- 3) Visual Inspection: cables, connectors, inter-cell connectors, vent caps, trays.
- 4) Check and fill all water levels. Check single point watering, if applicable.
- 5) Provide a detailed report.
