Cold Storage Warehouse Solutions

Material Handling Solutions for Cold Storage

Refrigerated warehouses, blast freezers and other cold storage warehouses require robust control systems and lift trucks that are intelligently designed to be tough.

As the need for cold storage facilities steadily increases, as does having the assurance that efficiency and durability are not being sacrificed, no matter the conditions in your warehouse.

RAYMOND

STORAGE CONCEPTS

Weather Conditioning

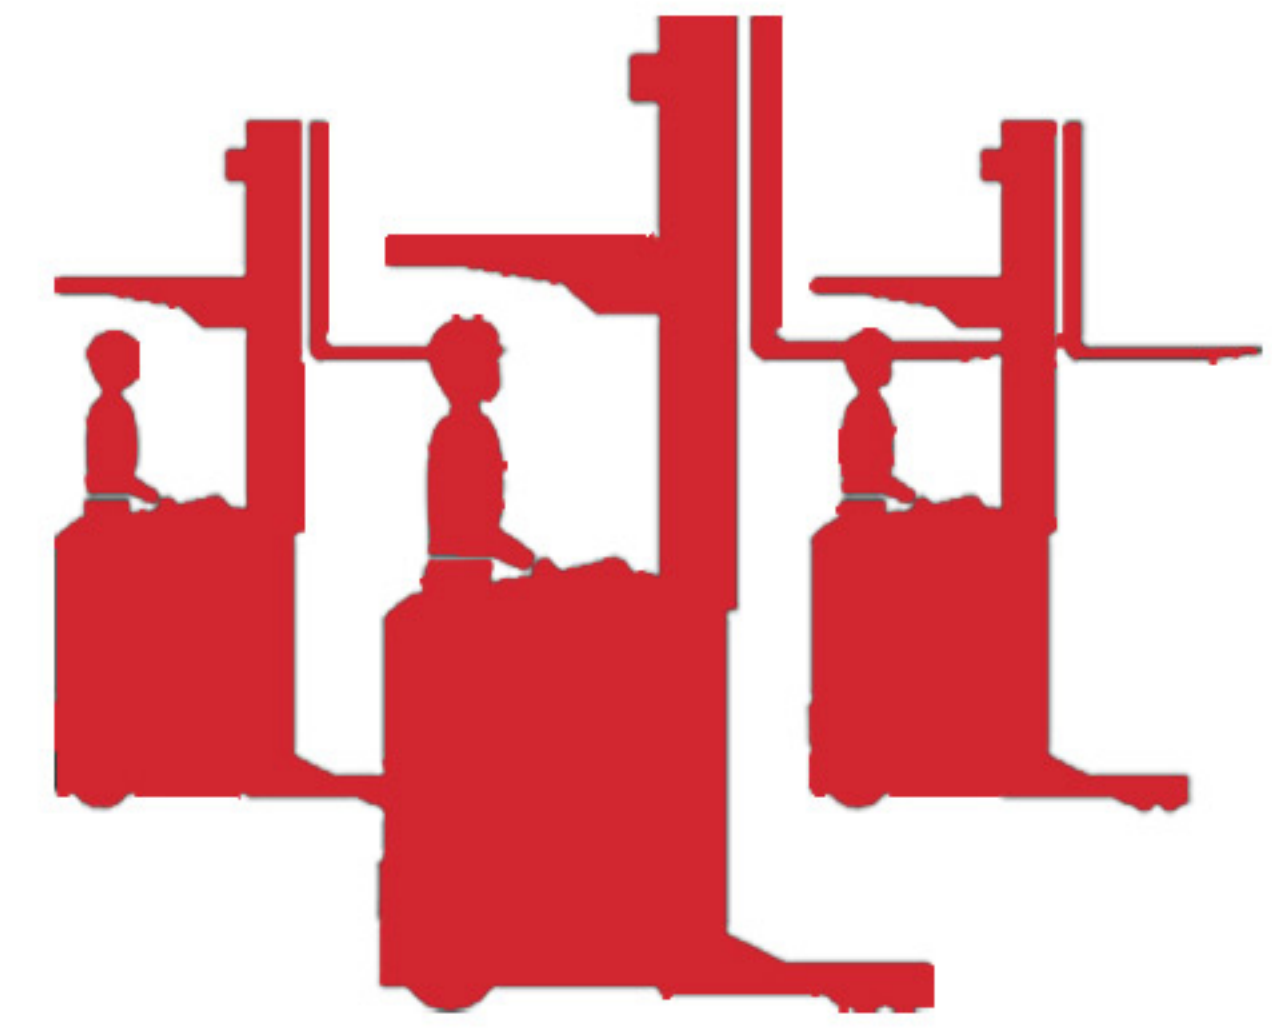

Raymond protects sensitive forklift control systems in cold storage warehouse applications with hydraulic, mechanical and electrical components that are matched to different temperature levels to assure peak performance and productivity.

- ❄ Cooler 50°F to 33°F
- ❄ Cooler/Freezer 50°F to -20°F
- ❄ Freezer/Ambiant Dock Only 32°F to -20°F

Industrial Batteries

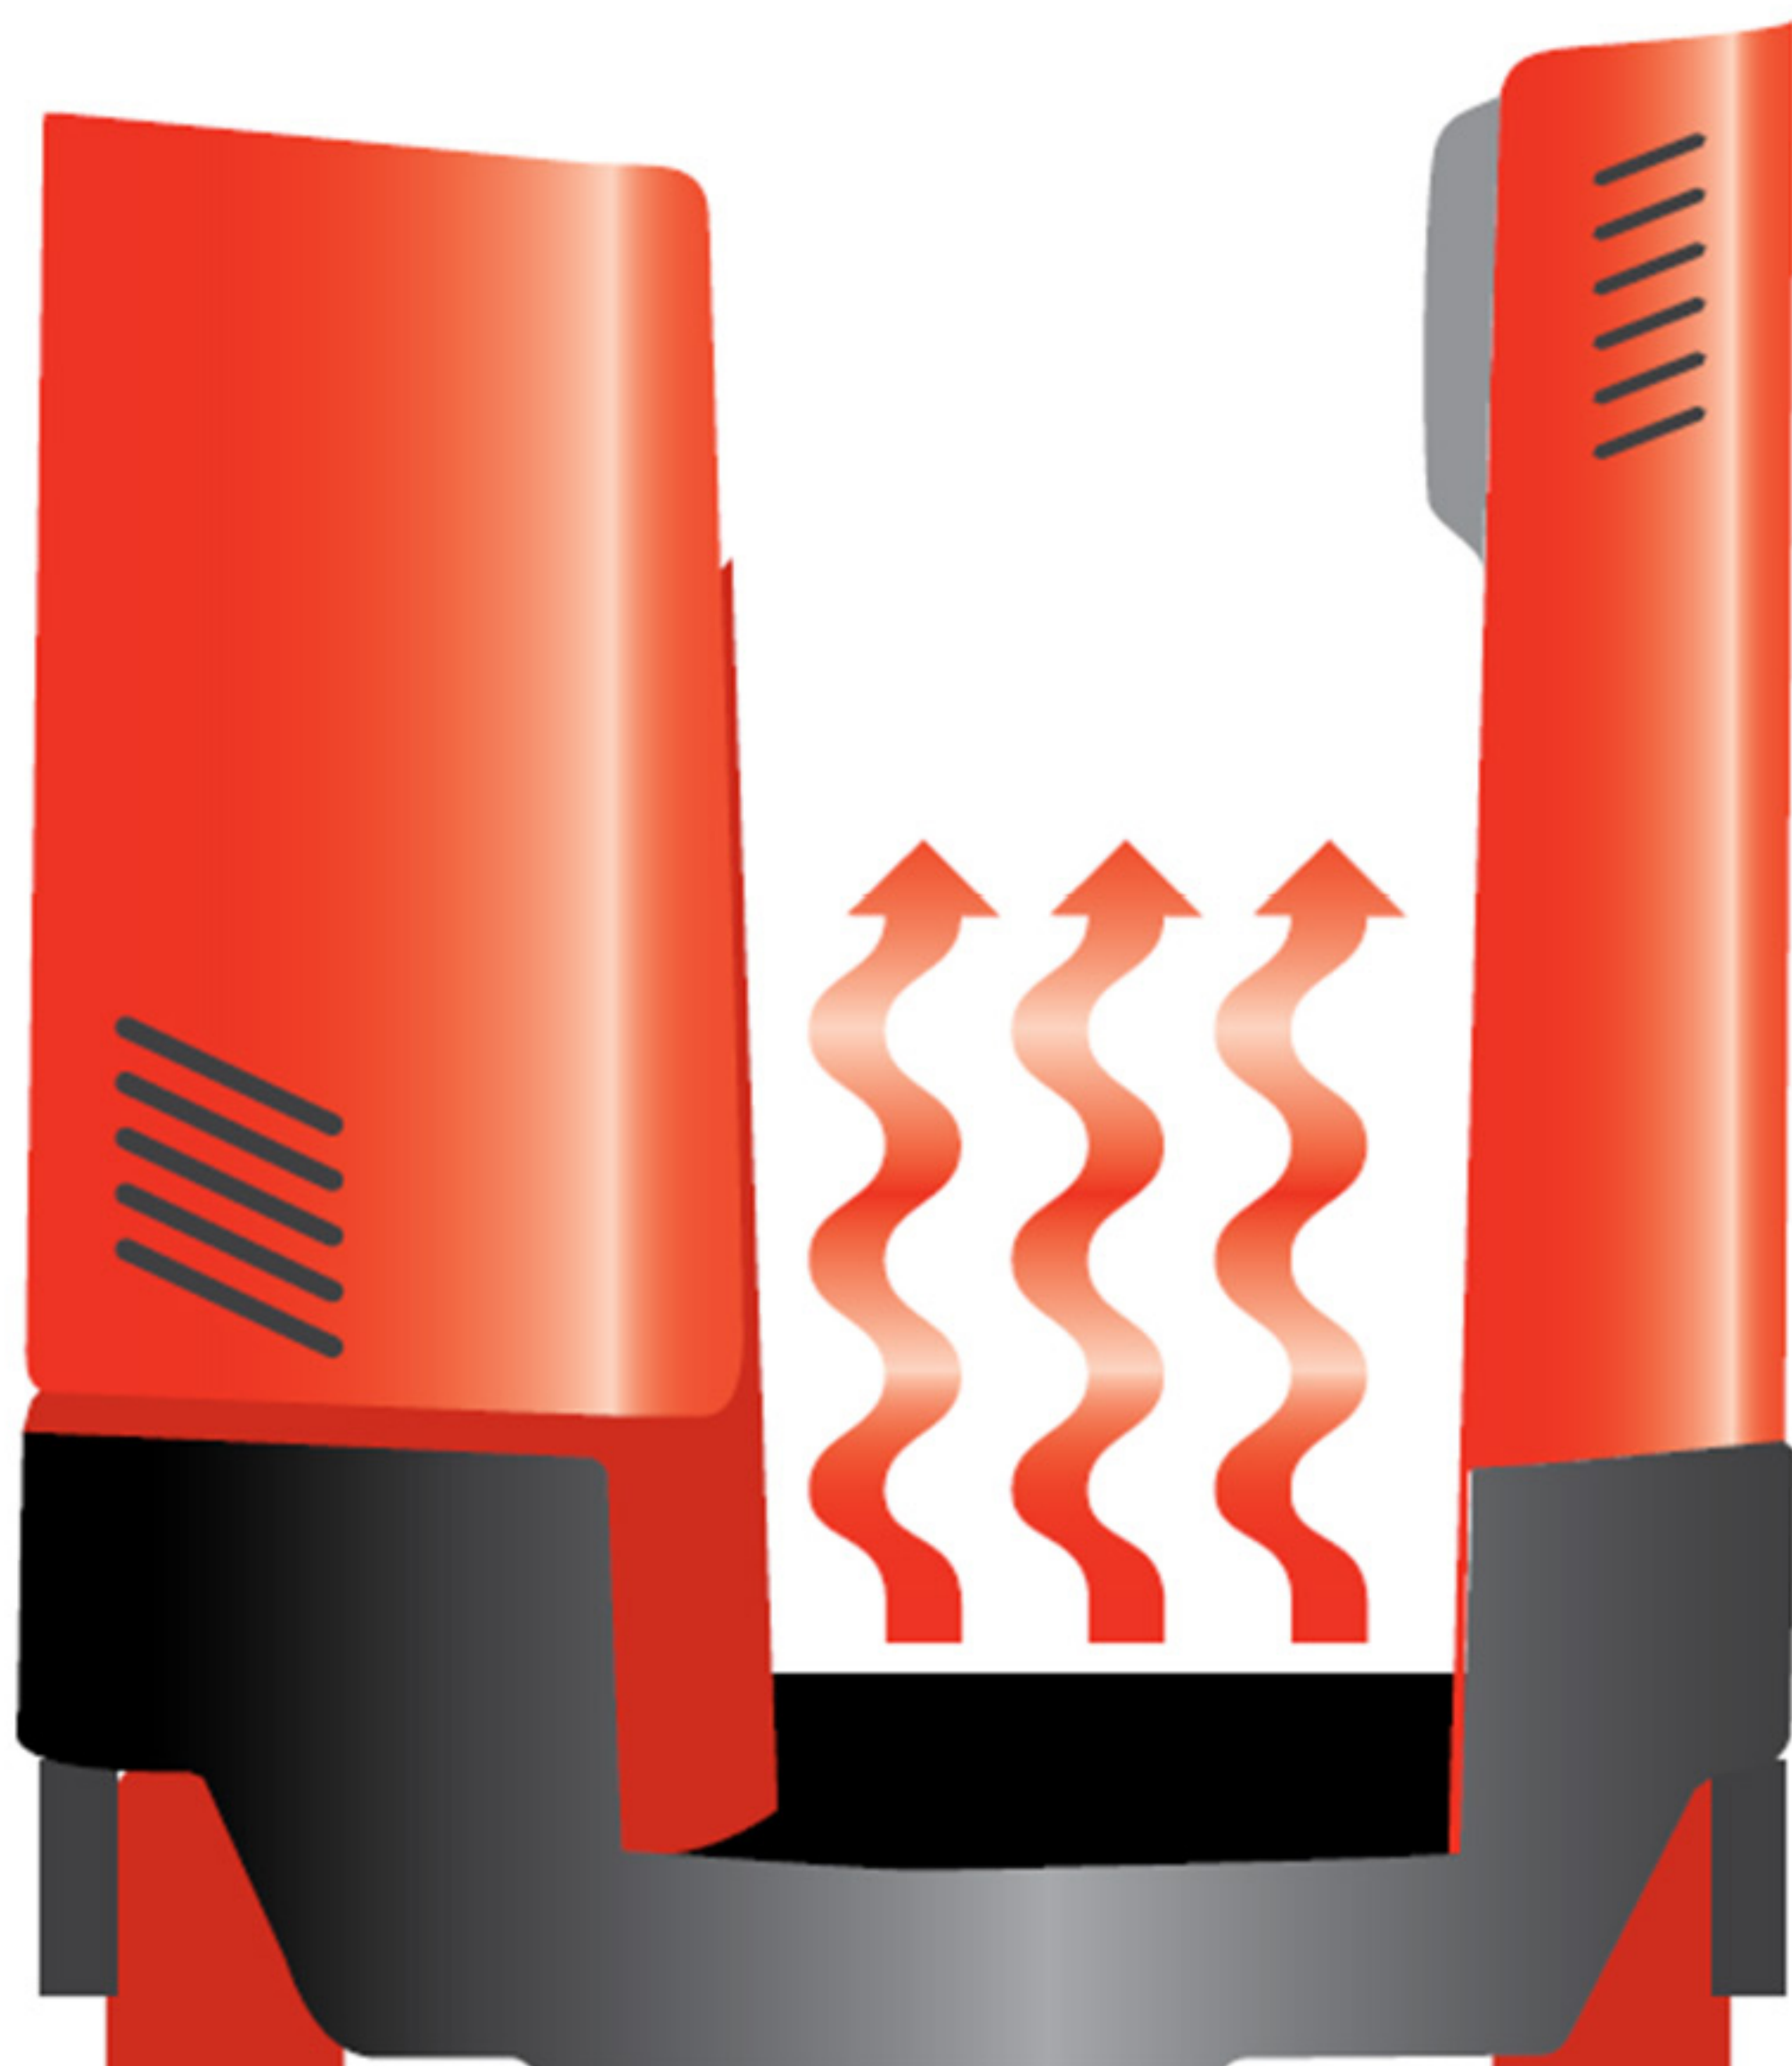

Industrial batteries can lose up to 35% of their capacity in refrigerated and cold storage warehouses. Raymond forklifts deliver performance that enhances productivity and energy efficiency while decreasing downtime and operating costs through longer battery run times and fewer battery changes through a shift.

High Performance

Our forklifts feature optimal traction and lift system tuning, precise controls and exceptional ergonomics. Unique design features such as steered idler, stainless steel pins and electronic component protection contribute to durable performance in your cold storage warehouse.

THERMAKIT™ SYSTEM

More Warmth, Greater Productivity

By keeping your hands and feet warmer longer, the affordable ThermoKit system adds up to more productivity. And, depending on the cold storage temperatures, operators may be able to wear less bulky gear when working in freezer environments.

The heated operator platform keeps the floor warm, helping you to focus on storing and retrieving more pallets. Additionally, the heated control handle permits you to wear a lighter glove for easier, more accurate data entry when using RF terminals.
